假设用评估准则 P 来评估计算机程序在某任务 T 上的性能, 若一个程序通过利用经验 E 在 任务 T 上获得了性能改善, 则我们就说关于 T 和 P , 该程序对 E 进行了(机器)学习。

A computer program is said to learn from *experience E* with respect to some class of *tasks T* and performance *measures P*, if its performance at *tasks in T*, as *measured by P*, improved with *experience E.* - (Mitchell, 1997)

#### How should I get to work?

Traffic is heavier than usual due to rain - taking Bus 303 is 10 minutes faster than driving.

Bus 303 arrives in 15 minutes. Leave the house in 5 minutes.

#### 编程平台介绍

Machine Learning Course Copyright belongs to Wenting Tu.

#### 安装指导

• 已安装Python

https://scikit-learn.org/stable/install.html

- 未安装Python
- 安装Anaconda (极力推荐)

https://www.anaconda.com/products/individual

#### 课程作业编写工具

• Jupyter Notebook

https://jupyter-notebook.readthedocs.io/en/stable/index.html

#### 程序示例

- 西瓜分类程序
- preprocessing\_example.ipynb
- classification\_example.ipynb
- 通过sklearn在线文档可以获得更多练习,例如 https://scikit-learn.org/stable/auto\_examples/index.html#classification (可留待后续章节讲完后再看)
